High-performance Design

Scalability

Aspila Topaz comes with a standard configuration of 3 trunks and 8 extensions. Starting with what you need or already have, just add on to a maximum of 27 trunks, 72 extensions as your company grows!

Fully Hybrid Ports

You can forget about ports dedicated to specific types of terminals. With hybrid ports, you can mix and match any combination of analogue single line telephones (SLT), proprietary keyphones, modems, facsimile machines, answering machines, and more. It's flexibility catered to your needs.

Euro-ISDN BRI Support

Take advantage of the integration of voice and data, the latest trend in telecommunications.

You can also enjoy supplementary services* like ISDN DDI/MSN, CLIP and others provided by your local service provider.

*Please contact your service provider about supplementary services in your area.

**OP Box provides additional slot for ISDN BRI

KSU + OP Box**

User-friendly Technology

Aspila Topaz is designed to make installation, upgrading and maintenance a breeze, thus saving precious business time.

* Due to continuous product enhancement, Sin Chew Alarm reserves the right to change / modify specification without prior notice.
